

Goals for this section:

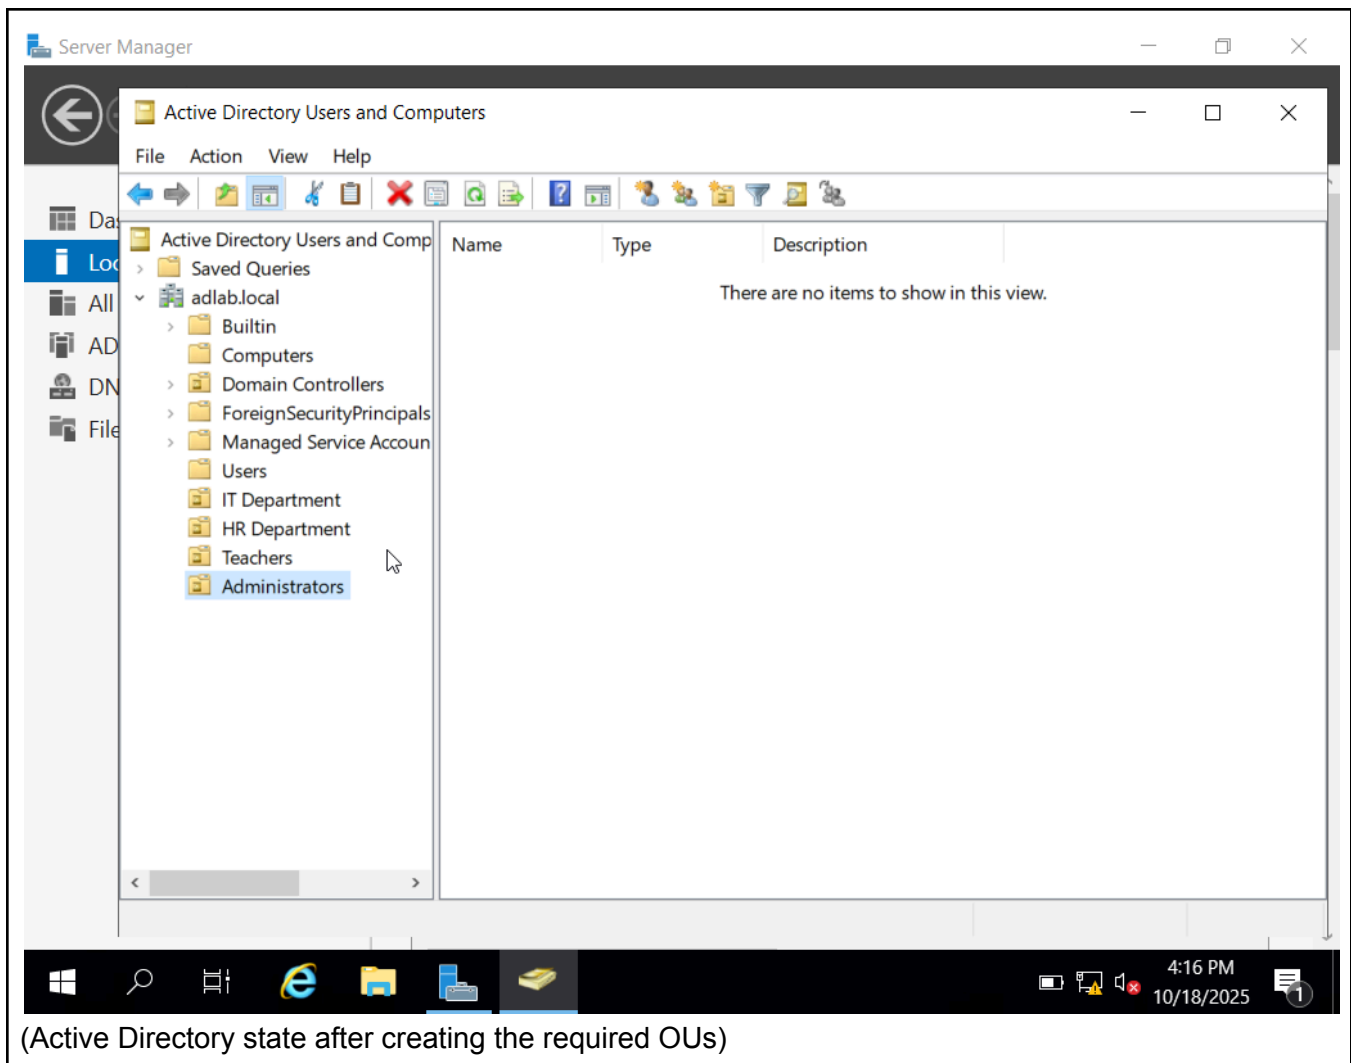

- Demonstrate how to create, configure and delete User accounts
- Demonstrate how to create, configure and delete Organizational Units (OUs) and Groups
- I will simulate a school setting, containing the following groups of users: IT staff, HR staff, Teachers, and Administrators
- Note: I will be using the Administrator account on the Domain Controller for simplicity and demonstration purposes. In the real world, it would be better to delegate limited administrative privileges to a user account for security purposes

Creating Organizational Units (OUs)

- Open "Active Directory Users and Computers"
- Navigate to the domain (adlab.local) → Right click and select "New" → Organizational Unit
- I will create **4** OUs for this lab:
 1. IT Department
 2. HR Department
 3. Teachers
 4. Administrators

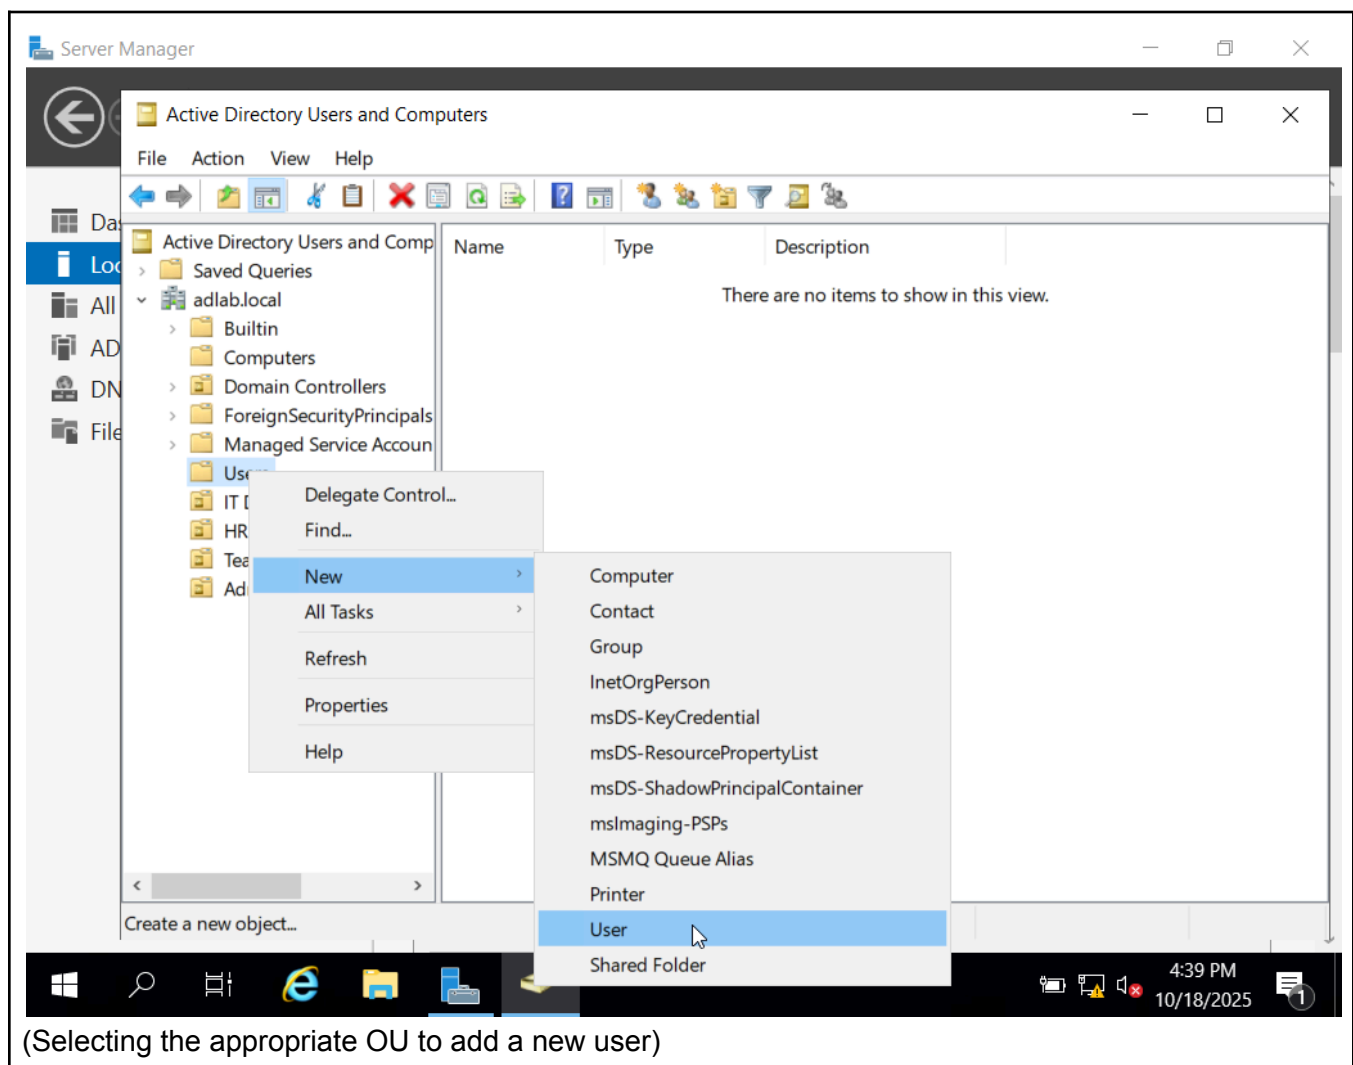

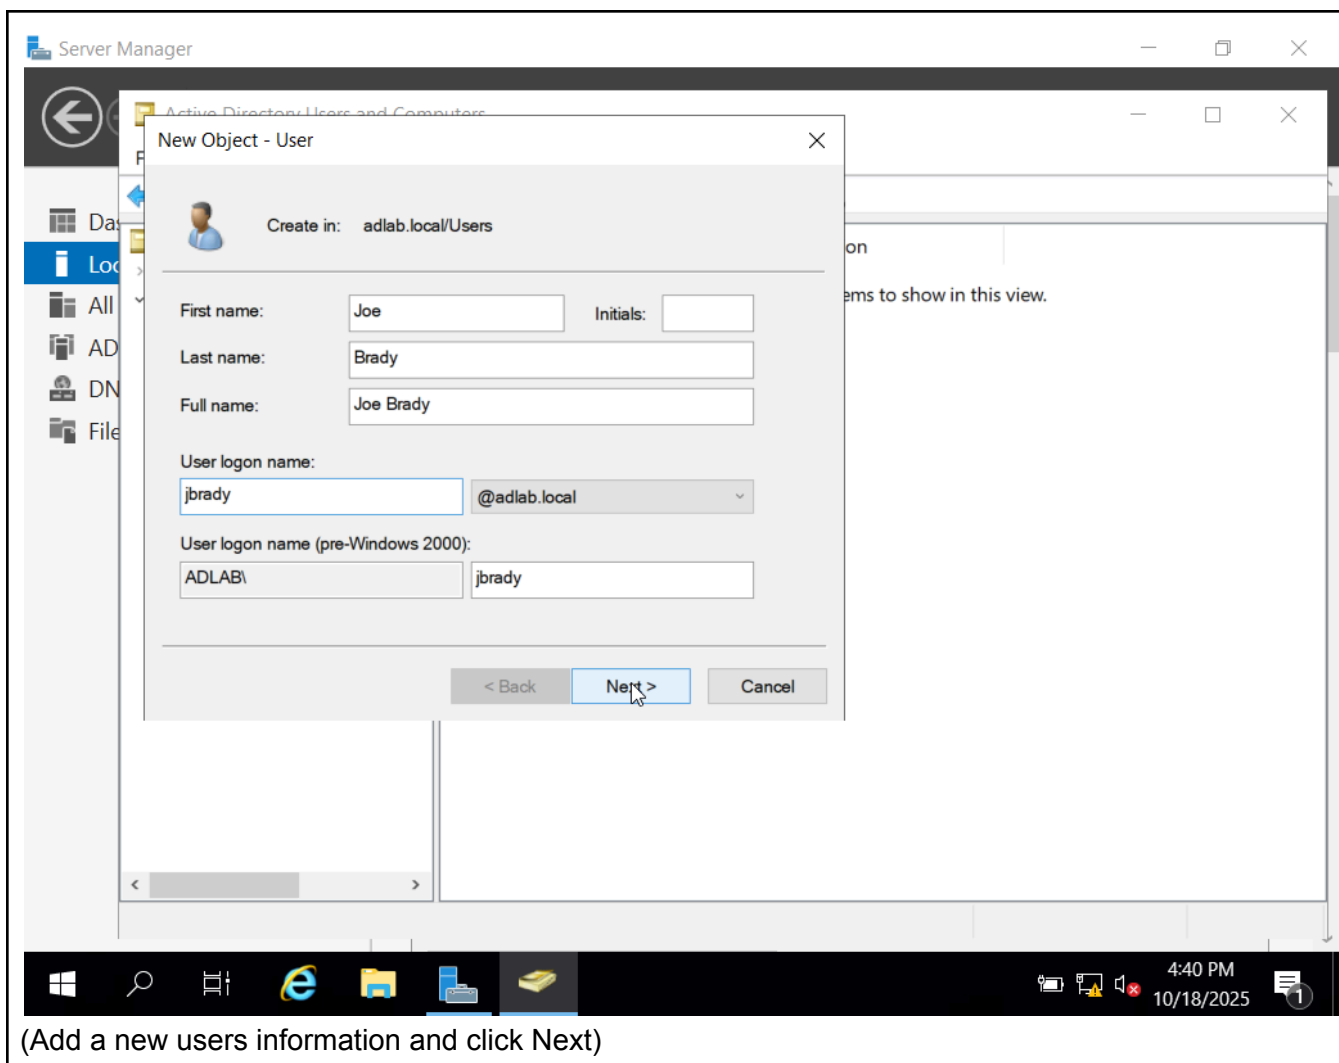

Creating user accounts

- Open "Active Directory Users and Computers"
- Navigate to the appropriate OU
- Right-click the OU, and select "New"-->User
- Enter the appropriate user information and click Next
- Enter a temporary user password
- Check the "User must change password at next login"
- Click Finish
- I created **8** users for this lab:

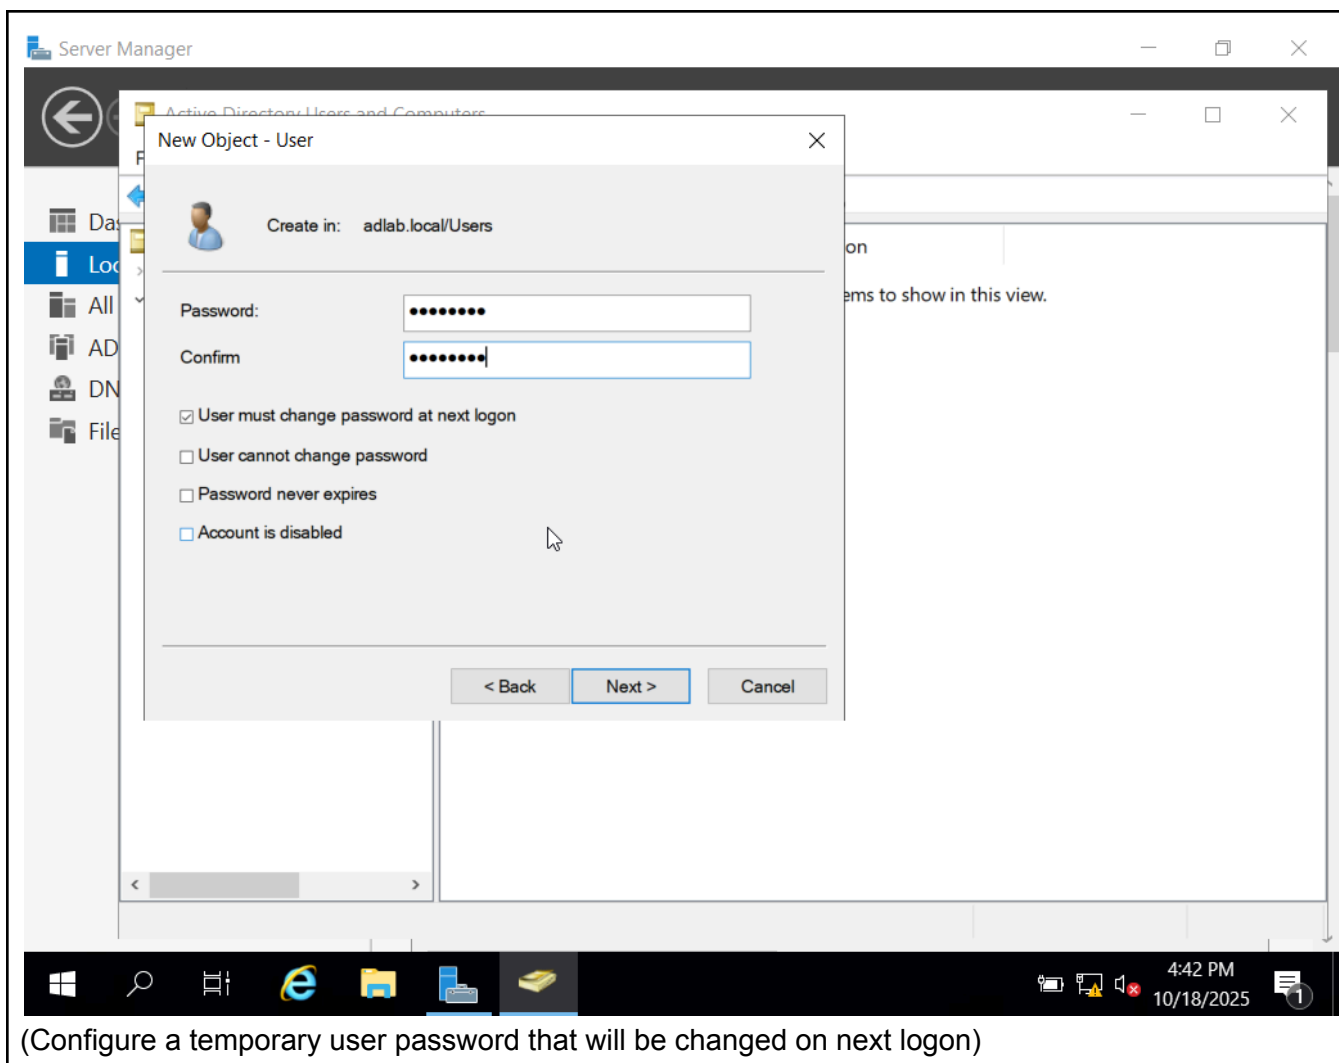

Number	Name	Domain Name	Position
1	Joe Brady	(jbrady@adlab.local)	IT Department Manager
2	Thomas Green	(tgreen@adlab.local)	HR Department

			Manager
3	Samantha Stewart	(sstewart@adlab.local)	Teacher
4	Benny Hill	(bhill@adlab.local)	Teacher
5	Mark Johnson	(mjohnson@adlab.local)	Administrator
6	Billy Powell	(bpowell@adlab.local)	IT Staff
7	Timothy Jergens	(tjergens@adlab.local)	Administrator
8	Felicia Brown	(fbrown@adlab.local)	HR Staff

(Add a new users information and click Next)

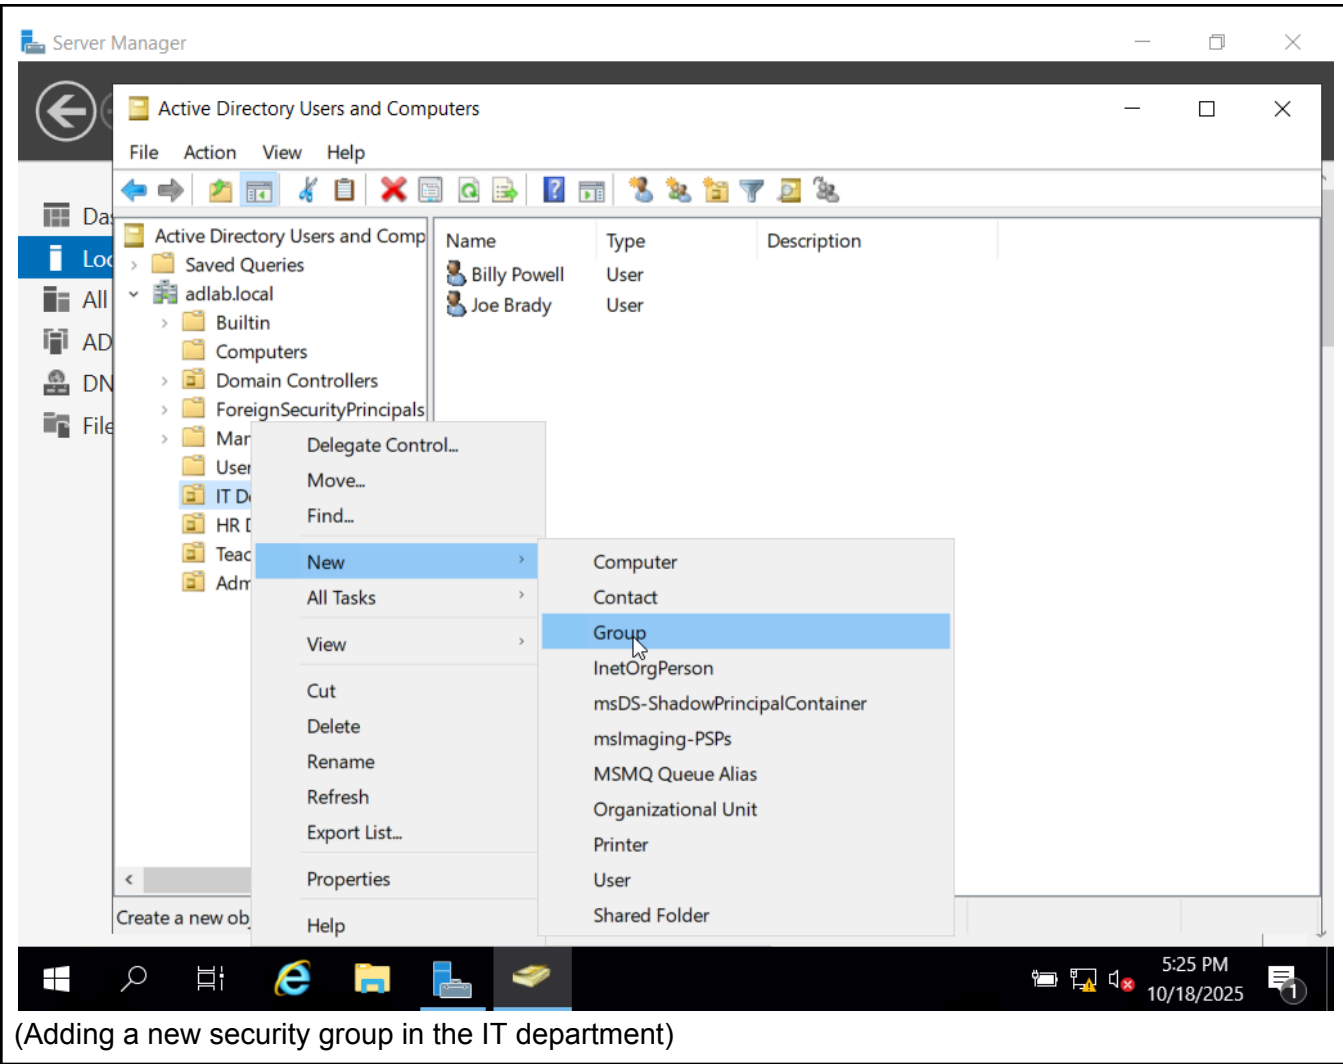

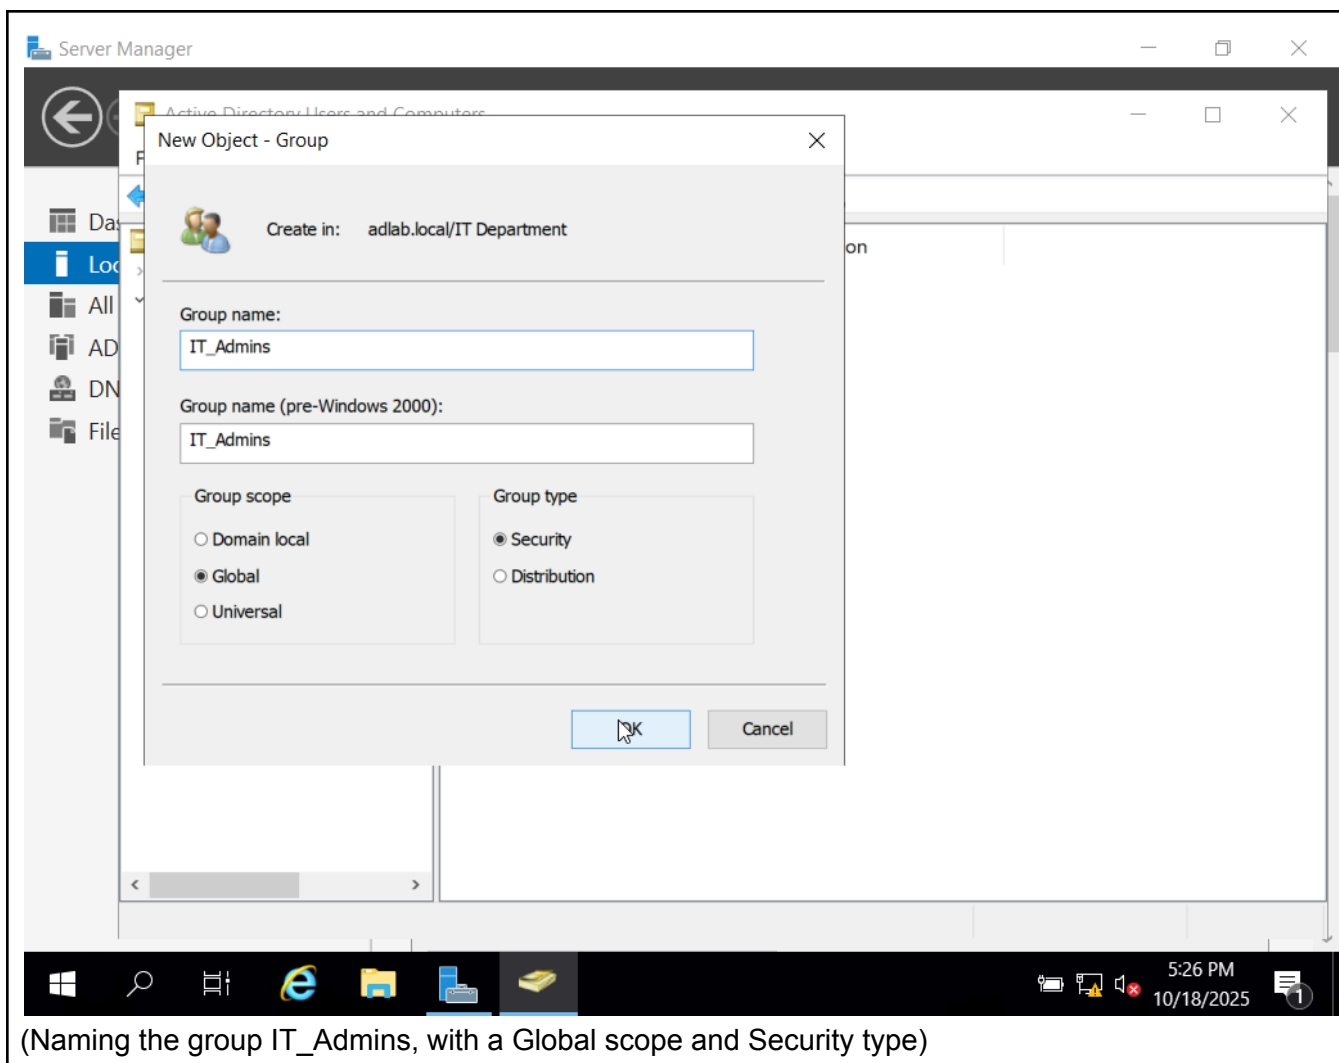

Creating and adding to security groups

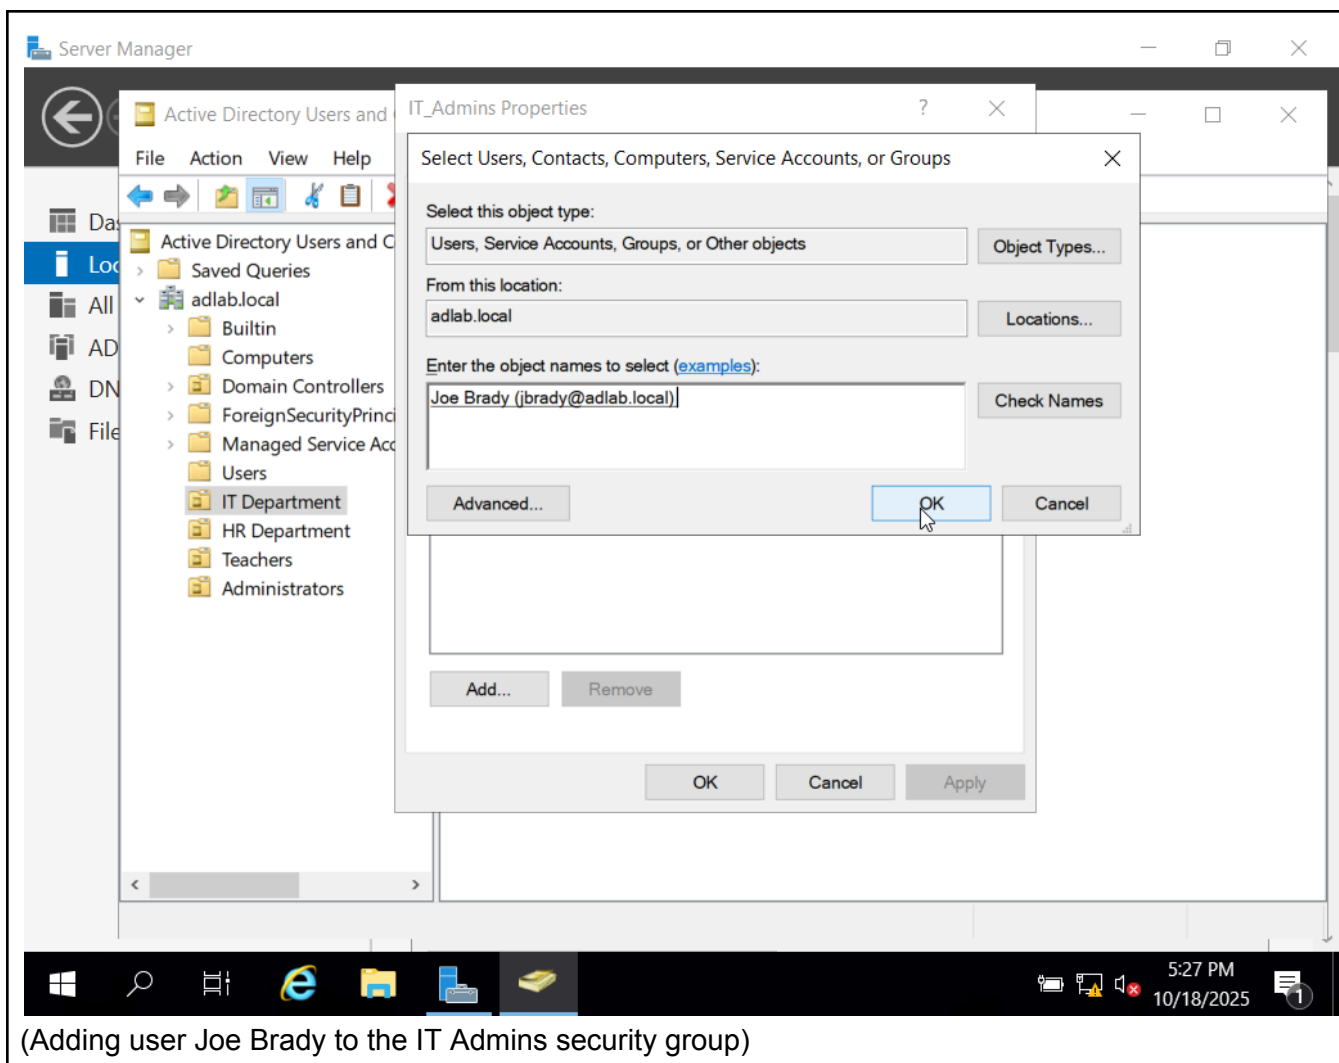

- Select the appropriate OU
- Right-click appropriate OU → New → Group
- Enter group name, select scope and type
- Navigate to the previously selected OU, Double click newly created group → Select “Members” ribbon → Add
- Search for the appropriate user → Check names → OK
- I will be adding **2** security groups:

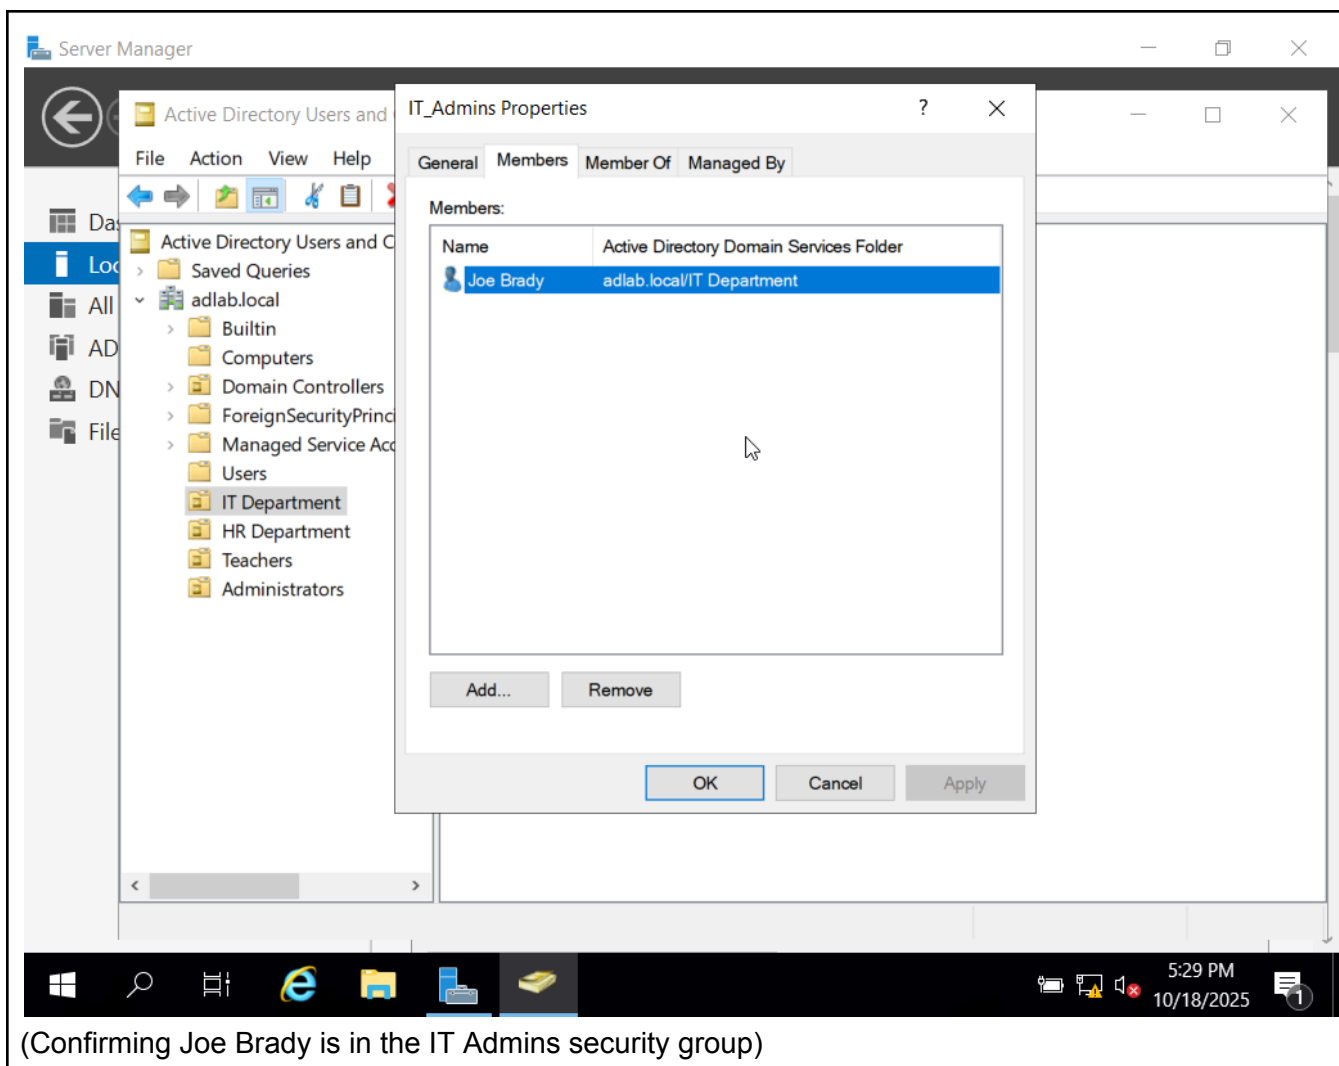

Number	Name	Type	Scope	Purpose
1	IT_Admins	Security	Global	For IT managers, providing additional permissions not

				granted to standard IT staff
2	HR_Management	Security	Global	For HR managers, providing additional access to confidential documents

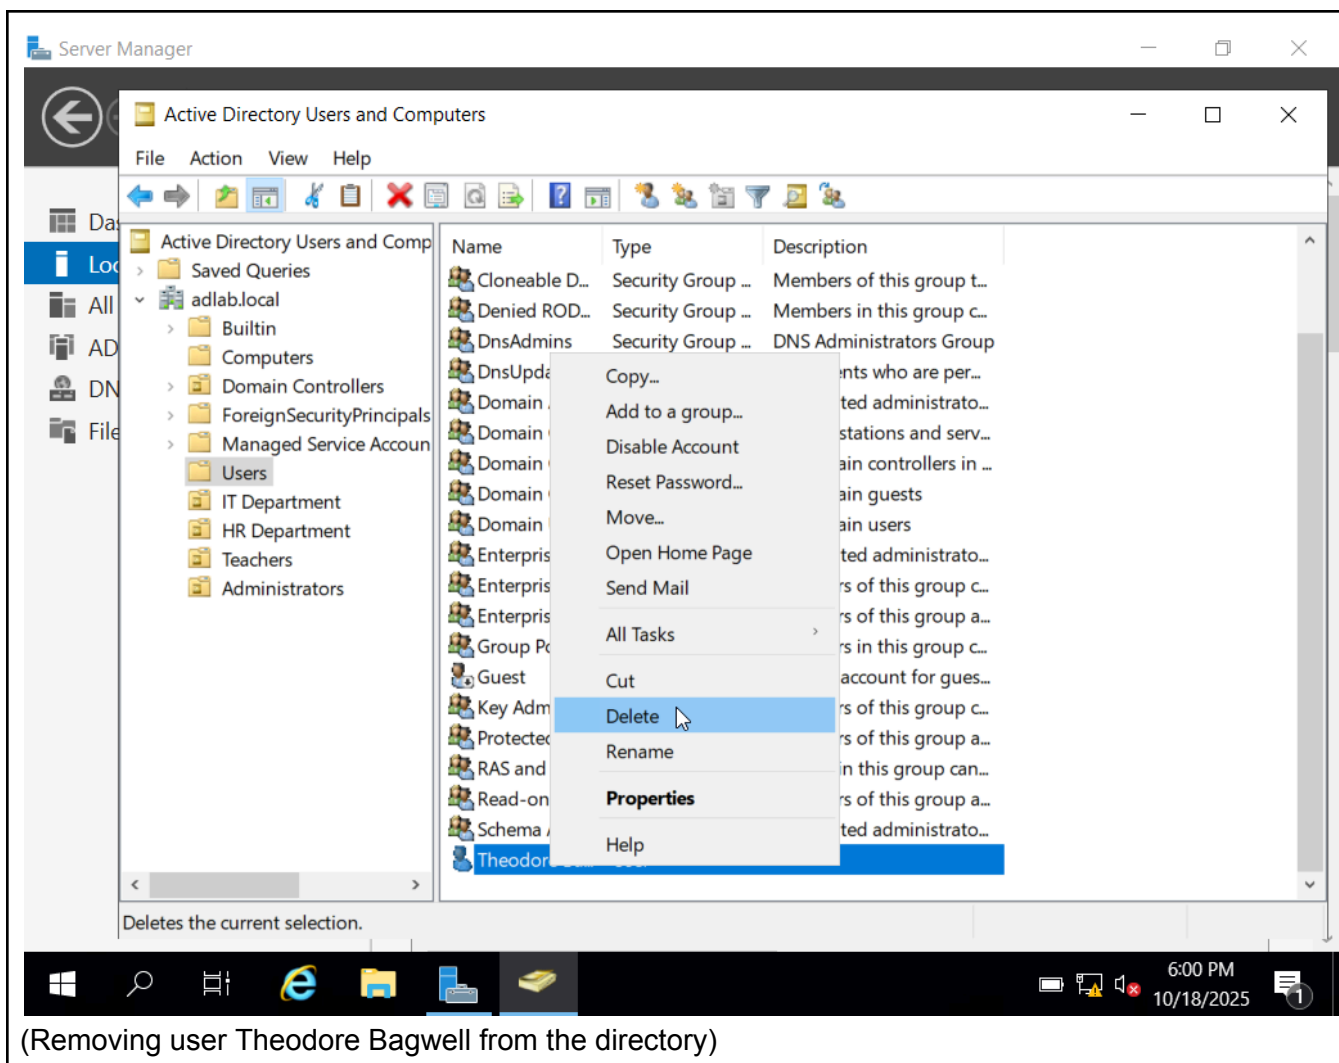

Deleting a User, Group, or OU

- Open AD UC and find a user, group, OU, or device you want to remove
- Right-Click the object → Delete → Yes

(Removing user Theodore Bagwell from the directory)
